PROJECTS

MMDB — HTML, CSS, jQuery, Javascript, Bootstrap

Mike's Movie Database is a front-end only project. It allows a user to search and catalogue movies to be sorted and stored for reference later on. The movies are stored in localStorage for persistence.

MMDB v2.0 — Ionic Framework, Angular.JS, MongoDB, Node.JS, Express.JS

Mike's Movie Database version 2.0 is an Ionic Framework application. It also is a tool for searching and cataloguing movies, as well as finding streaming sources for movies and television shows. It is built with Ionic so that it can be run on an iOS device. The users and movies are stored in a MongoDB Database for persistence and authorization.

rollCall — jQuery, Node.JS, Express.JS, PostgreSQL, Bootstrap

rollCall is a school ticket management system designed for school dances and events. It allows student IDs to be scanned for selling and redeeming tickets, as well as CSV's of students to be imported at the start of a semester.

PirateRunner — PhoneGap, Phaser.js, HTML, CSS

PirateRunner is a mobile endless-runner game, where a skeleton Pirate tries to collect as many coins as possible, while avoiding running in to crates that are randomly generated.
